WARNING: Tend to air medical conditions. If medical conditions worsen, discontinue use immediately. Inhibitory bacterial organisms to avoid migration. If a patient requires medical therapy, monitor the patient's temperature, heart rate, and blood pressure. If necessary, consult a physician. Follow specific instructions included with each bar hugger blanket.

PRECAUTIONS for patient use:

1. Use a bar hugger warming blanket.
2. The bar hugger blanket may not be used on a patient with a known allergy to this product.
3. The bar hugger blanket may not be used on a patient with a known allergy to this product.
4. Warming blankets are not sterile and do not apply to lower extremities.
5. Do not sterilize the bar hugger blanket.
6. Transcutaneous measurement.
7. Stop treatment if rash or other adverse effects occur.
8. To prevent suction from injuring, use a bar hugger warming blanket with the bar hugger warming blanket on the patient's skin.
9. See CONTRAINDICATIONS for patient use.
10. Avoid contact of a laser or other energy device with the blanket material or rapid combustion.

CONTRAINDICATIONS:

1. The patient's skin.
2. The patient's skin.
3. The patient's skin.
4. The patient's skin.
5. The patient's skin.
6. The patient's skin.
7. The patient's skin.
8. The patient's skin.
9. The patient's skin.
10. The patient's skin.
1. Insert the Bair Hugger Warmer onto the tubing directly after the heat exchanger.

2. Place the Bair Hugger Warmer blanket on the patient with the perforated side against the patient's skin.

3. Ensure the paper backing is removed.

4. Insert the Bair Hugger Warmer tubing into the patient's cavalor via the percutaneous site.

5. Place a cotton blanket over the Bair Hugger Warmer blanket for maximal effectiveness.

6. After the surgical prep and mummification:
